

# A — Lead-variant gene-body proximity

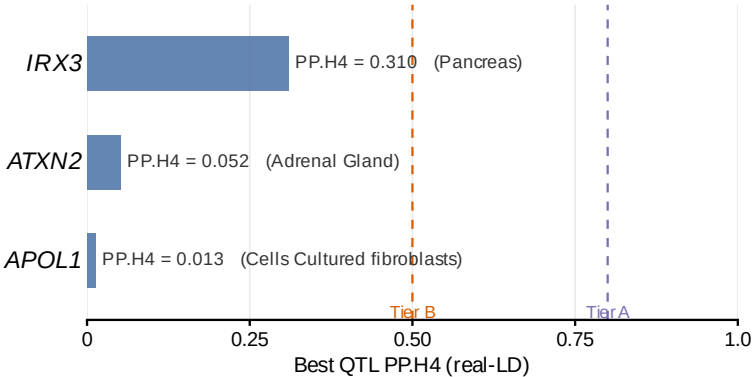

Real-LD-surviving SuSiE credible sets (n = 51)

- Within gene body
- Flanking ≤100 kb
- Distal intergenic

# B — Tier C resolving-gene scorecard

Real-LD signals at 3 of 9 Tier C regions (all below threshold)

Panel A: gene-body-intersection proxy via MAGMA NCBI37.3 gene loc; full CADD / PolyPhen-2 / SIFT / GTEx eQTL aggregation deferred.  
Panel B: 3 named Tier C genes; 0 Tier A + 0 Tier B; identity-LD pathway-level claims withdrawn (see Results §Pathway Enrichment).
