

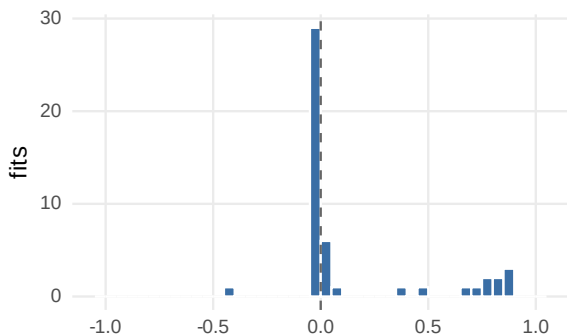

Figure S2. Paired-fit structural inflation (n = 48 paired non-empty SuSiE-RSS fits)

real-LD vs identity-LD per-fit: PIP redistribution, lead-variant rank, credible-set Jaccard. Source: results/fine_mapping/susie + results_

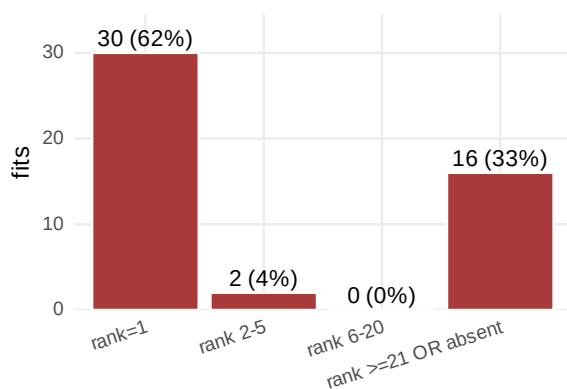

(A) PIP-of-top-variant: real - identity

median Delta = 0.000 (n = 48 paired)

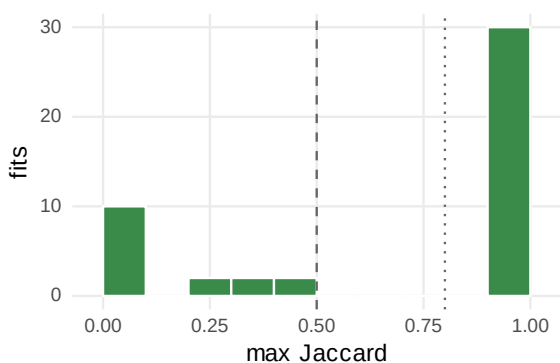

(B) Lead-variant rank under real-LD

identity-LD top variant's rank in real-LD (n = 48 paired)

(C) Max per-fit credible-set Jaccard

≥ 0.8 : 30 (62%) | < 0.5 : 16 (33%)

(D) PIP-top per pair (n = 48)

diagonal = perfect agreement; below = real-LD lower
